TRAINING AND DEVELOPMENT

Training and development is the field concerned with **organizational activity** aimed at **enhancing the performance** of individuals and groups in organizational settings. Training and development refers to organized learning activities in the organization to improve performance and / or personal growth for the purpose of improving job, the employee and the organization

The need for Training and Development is determined by the employee's performance deficiency, computed as follows.

Training & Development Need = Standard Performance – Actual Performance

Training: Training refers to the **process of imparting specific skills**. An employee undergoing training is presumed to have had some formal education. No training program is complete without an element of education. Hence we can say that Training is offered to operatives.

Education: It is a theoretical learning in classrooms. The purpose of education is to teach theoretical concepts and develop a sense of reasoning and judgment. That any training and development program must contain an element of education is well understood by HR Specialists.

Development: Development means those **learning opportunities** designed **to help employees to grow**. Development is not primarily skills oriented. Instead it provides the general knowledge and attitudes, which will be helpful to employers in higher positions. Efforts towards development often depend on personal drive and ambition. Development activities such as those supplied by management development programs are generally voluntary in nature. Development provides knowledge about business environment, management principles and techniques, human relations, specific industry analysis and the like is useful for better management of a company

TRAINING

-as a planned effort by the company to facilitate employees' learning of job related competencies.

-by Noe, Hollenbeck, Gerhart & Write

Training	Development
Focuses on learning the necessary skills required to perform a job. Training is skills focused	Focuses in the preparation needed for future jobs or jobs than an individual may potentially hold in the future, and is evaluated against those job.
Training is presumed to have a formal education	Development is creating learning abilities
Training needs depend upon lack or deficiency in skills	Development is not education dependent
Trainings are generally need based	Development depends on personal drive and ambition
Training is a narrower concept focused on job related skills	Development is voluntary
Training may not include development	Development is a broader concept focused on personality development
Training is aimed at improving job related efficiency and performance	Focuses in the preparation needed for future jobs or jobs than an individual may potentially hold in the future, and is evaluated against those job.

TYPICAL REASONS FOR EMPLOYEE TRAINING AND DEVELOPMENT

1. When a performance appraisal indicates performance improvement is needed.
2. To benchmark the status of improvement so far in a performance improvement effort.
3. As part of an overall professional development program.
4. As part of succession planning to help an employee eligible for a planned change in role in the organization.
5. To "pilot" or test the operation of a new performance management system.
6. To train about a specific topic such as computer skills, quality assurance, communications, supervisory, customer service, human relations, how to handle a grievance and discipline, labor relations, safety, negotiations, and many other.

SPECIFIC BENEFITS FROM THE EMPLOYEE TRAINING AND DEVELOPMENT

Training and development opens the floodgate to many benefits inuring to the organization. Among them are:

1. Increased job satisfaction and morale.
2. Increased employee motivation.
3. Increased effectiveness in processes, resulting in financial gain.
4. Increased capacity to adopt to new technologies and methods.
5. Increased innovation in strategies and products.
6. Reduced employee turnover (since training increases job satisfaction and employee morale and motivation, and enhances career growth, employee turnover is minimized)
7. Enhanced company image
8. Improved risk management and ethical behaviour in business

CAVEAT ON TRAINING

- Not the answer to all problems in the company.
- Tendency of some organizations to buy “off the shelves” training programs without considering their relevance or direct applicability to their needs.
- Unexpected machine / equipment breakdown

The cause and effect problem analysis should be first be applied before deciding whether or not training is the answer.

THE FOUR-STAGE TRAINING CYCLE

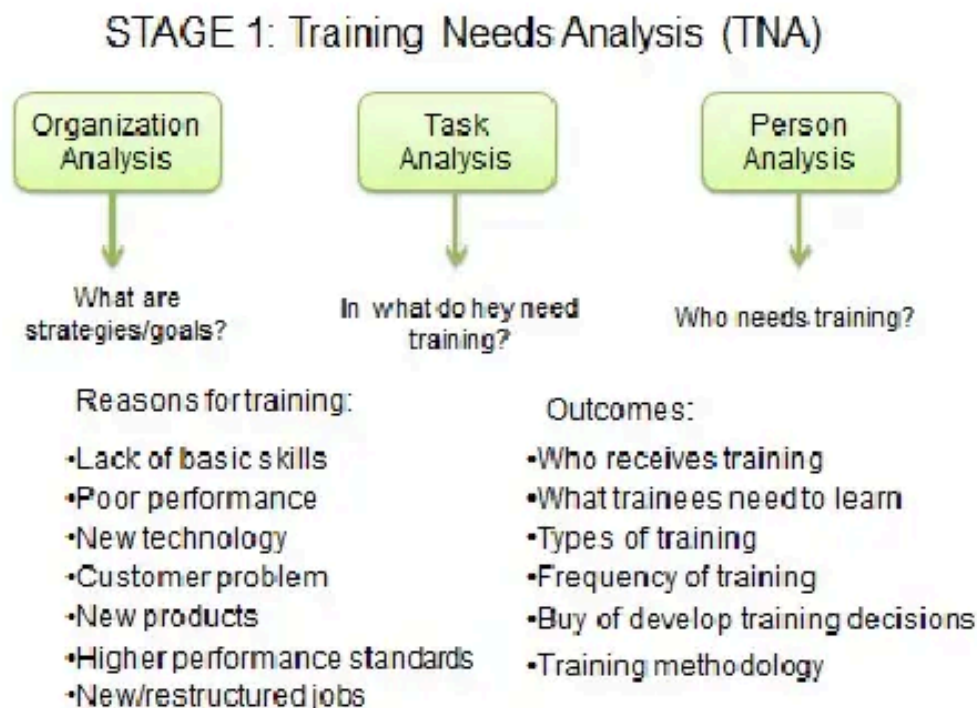

STAGE 1: Training Needs Analysis (TNA)

STAGE 2: Planning and Training

STAGE 3: Implementing the Training

STAGE 4: Evaluating the training

STAGE 1: Training Needs Analysis (TNA)

TRAINING NEEDS ANALYSIS PROCESS

Organization Analysis

There must be a link between the firm's strategies / goals and training and development

Task Analysis

This activity involves identifying the important tasks and job related Knowledge, Skills and Attributes (KSA) that need to be emphasized in training for employees to complete their tasks.

Person Analysis

The final phase of the TNA is the employee assessment. This phase identifies gaps between skills and competencies required of the job and the actual skills and competencies possessed by the employees.

Other Issues on Training Needs Assessment

- Ensuring employees' readiness for training
- Creating a learning environment
- Ensuring transfer of training

STAGE 2: Planning the Training

A training plan describes the key decisions, tasks and resources needed to develop a strategy or developing training.

Simple matrix form of the basics components of one training plan

Training Goal	Learning Objectives	Learning Methods/ Activities	Facilities, Resource Persons	Budget
Overall results or capabilities to be achieved by implementing the training plan.	To be able to do as a result of the learning activities the skills required for the job.	Lectures, workshops, case studies, and teambuilding sessions.	Facilities include the choice of the venue of training, audio visual equipment, handouts, papers, meals, snacks, transpo/accom, offsite , choice of resource persons	The specific costs of training should be spelled out to comply with the accounting procedures of the company

Other Issues in Planning the Training

- Should the training take place on the job or off the job?
- Should it be done by the company or outsourced to a training provider?
- Should it be done inside the company or off-site?
- What kind of training methods should be used?

STAGE 3: Implementing the Training

To put the training program into effect according to definitive plan or procedure is called training implementation.

Training Implementation can be segregated into two segments:

- Practical administrative arrangements
- Carrying out the training

STAGE 4: Evaluating the Training

The training process does not end when training is completed. Its effectiveness must be valued against its outcome. The outcomes must be related to the objectives of the training program.

Outside of the trainees' reactions which are called affective outcomes, results are evaluated on the following criteria:

1. Learning that occurred
2. Behaviour changes
3. Impact on corporate objectives

CAREER PLANNING

Career planning is the systematic process by which one selects career goals and the path to these goals and the path to these goals. A career plan is a blue print in which the entire career of employees is mapped out from the point of their entry into the point of their retirement from the organization.

CHARACTERISTICS OF CAREER PLANNING:

- Career planning is a process of developing human resources rather than an event.
- It is not an end itself, but a means of managing people to obtain optimum results.
- Career planning is a continuous process due to an ever changing environment.

- Career planning is an individual's responsibility, but it is the responsibility of an organization to provide guidance and counseling to its employees in planning their careers and in developing and utilizing their knowledge and skills. Goals of employees should be integrated with organizational goals.
- The basic aim of career planning is integration of individual and organizational needs.
- To attract and retain the right type of persons in the organization.
- To map out the careers of employees suitable to their ability, and their willingness to be trained and developed for higher positions.
- To ensure better use of human resource through more satisfied and productive employees.
- To have a more **stable work force** by reducing labour turnover and absenteeism.
- To improve morale, motivation and provide guidance and encourage employees to fulfill their potentials.

PROCESS OF CAREER PLANNING

- Identifying individual needs and aspirations
- Analyzing career opportunities
- Identifying match and mismatch
- Formulating and implementing strategies
- Reviewing career plans

Career planning generally involves **getting to know who you are, what you want, and how to get there**. Keep in mind that career planning is a **continuous process** that **allows you to move from one stage to another stage** as your **life changes**.

COUNSELLING

COUNSELING is defined as **discussion of an emotional problem** with an employee, with the general objective of decreasing it.

Therefore, Counseling:

- Deals with an emotional problem.
- Is an act of communication.
- Is generally to understand and/or decrease an employee's emotional disorder.
- Can be done by both, the managers and the professionally trained counselors.

Counseling is a process through which one person helps another by purposeful conversation in an understanding atmosphere.

Its basic purpose is to assist the individual to make their own decision from among the choices available to them.

Any condition, on or off the job, may need counseling. These conditions can be from:

- Job dissatisfaction,
- Resistance to change, or,
- Alienation, Disorientation etc.
- Other major conditions that must be clearly understood are:
 - Frustrations,
 - Conflicts, or,
 - Stress.
 - Aggression,
 - Apathy,
 - Withdrawal,
 - Regression,
 - Fixation,

- Physical disorders, or,
- Substituted goals.

Counseling objectives are achieved through performing one of the following counseling functions:

- Advise.
- Reassure,
- Communicate,
- Release of emotional tensions,
- Clarified thinking, and,
- Reorientation.

Who should do the counseling?

- Supervisors/Managers or (Superiors in hierarchy), Specialists, and Professional counselors.

Cautions in Counseling:

The counselor's approach depends upon his own assessment of the situation, and the personality of the counselee.

According to Eisenberg & Delaney, the aims of Counselling are as follows:

1. Understanding self
2. Making impersonal decisions
3. Setting achievable goals which enhance growth
4. Planning in the present to bring about desired future
5. Effective solutions to personal and interpersonal problems.
6. Coping with difficult situations
7. Controlling self defeating emotions
8. Acquiring effective transaction skills.
9. Acquiring 'positive self-regard' and a sense of optimism about one's own ability to satisfy one's basic needs.

The Counseling Process

Step 1. Describe the changed behavior. Let the employee know that the organization is concerned with work performance.

Step 2. Get employee comments on the changed behavior and the reason for it. Confine any negative comments to the employee's job performance.

Step 3. Agree on a solution. Emphasize confidentiality.

Step 4. Summarize and get a commitment to change.

Step 5. Follow up.

HUMAN RESOURCE IN THE 21ST CENTURY

Training in the 21st Century utilizes tried and true training methodologies combined with new technologies to enable companies and individuals to evolve proactively with a changing world.

Employee training in the 21st century increasingly uses distance learning alternatives of web-based conferencing software and web-based training as well as learning solutions deployed to mobile devices.

Monody & Noe (2005) elaborated that HRM in 21st century is a process that utilizes the skills and knowledge of employees in order to achieve organizational goals. Similarly Tzafrir et al. (2004) explained that it is the responsibility of HR department to be more focused towards employees' benefits and concerns because they play an important role in the success of any organization.

In 70s the HRM division was called "Personnel", as time move on and it came the time between 1945-1979 it changed into "Personnel Management" which influenced upon employee's legislation and administration. The concept of Human Resource Management further started to develop in 1990.

Kamoche (1997) stated that in 21st century HRM includes number of activities such as conducting job analysis, having concern with personnel needs and wants, recruitment and selection of efficient people for a particular job, providing training programs to employees in order to improve employees' current performance, providing incentives and benefits to employees, solving disputes between employees and management, determining wages and salaries, etc.

Integrate:

- 3D learning activities
- Self-paced e-learning workshops
- Real-time Webinars
- Face-to-face interactive training
- Mobile learning applications
- Social learning tools
(e.g., shared documents, internal wikis, Tweetchat etc.), as tools for collaborative learning
- Communities of practice

FEATURES

Effective training programs supporting the 21st century work force continue to use traditional classrooms but focus on more personalized approaches to learning and development.

BENEFITS

Investing in creating on-the-job skills training helps employees gain knowledge and perform at higher levels in the workplace.

HRM Future Influencing Factors:

- First factor is the increased centrality of people to organizational success.
- The second factor is the focus on whole system and integrated solutions for the proactive role of HRM.

- The third factor is the strategic alignment and the impact of 21st century Human Resource which is integrated by efforts and expectations suggesting that importance of these factors will increase in the coming years too.
- The last factor is the capacity for change.

Emerging Practices of HRM in 21st Century:

1. Organizational Learning

Is the process of "detection and correction of errors." Organizations' learning process consists of four major steps:

Step 1: Knowledge acquisition

Step 2: Knowledge sharing

Step 3: Knowledge interpretation

Step 4: Knowledge memorization

2. Human Capital Management

Human capital management is the approach that perceives employee staffing and employees as asset or human capital.

3. Counseling

Counseling is the interaction between two individuals.

A critical challenge society faces at the start of the twenty-first century is the attainment of full employment.

Human Resource Management is concerned with enhanced productivity fully utilizing the combined talent and skills of the entire workforce of an organization. Human resources may be broadly defined as the sum total of all the skills and capabilities
